APRO of Industrial Flash Memory Storages

PCMCIA ATA Flash Card

The APRO's PCMCIA ATA Flash Cards combine 3S advanced Flash controller technology and **NAND Type SLC flash memory.** The APRO's PCMCIA ATA Flash Cards come with **commercial temperature grade (0°C ~+70°C)** and **industrial temperature grade (-40°C ~+85°C)** to fulfill various specialized applications in normal or harsh operating environments. With the great advantages of non-volatile and solid state, the PCMCIA ATA Flash Cards are more robust than conventional hard disk drives and consume around 10% of the power required by small disk drives. Normally PCMCIA ATA Flash Cards are applied to Handheld PCs, PDAs, Digital Cameras, Laptops and Desk PCs as data storages devices. When a PCMCIA ATA Flash Card inserted in an IDE adapter, and it just performs as a traditional rotating disk drive. APRO's PCMCIA ATA Flash Cards are the ideal solutions for critical applications which request for long term supply with consistent key components.
